Enhanced DEA File

Current DEA Provider Count = 1,354,798

The Drug Enforcement Administration (DEA) is the only single-mission federal agency dedicated to drug law enforcement. One of the DEA's missions is to prevent the diversion of pharmaceutical controlled substance and listed chemicals from legitimate channels, while ensuring an adequate and uninterrupted supply for medical, commercial and scientific needs.*

DEA Identification numbers are unique per provider, per location. DEA IDs are assigned to providers to track the distribution and storing of controlled substances. Our Enhanced DEA File is supported by clean, standardized, and USPS matched addresses and is ready for use within your organization. Output files may be customized to your specific needs.

Much like the need for organizations to have state license and specialty information, Enhanced DEA is useful for knowing which doctors, at which locations, are able to receive and store controlled substances.
